# Scientific veracity scoring of news reports

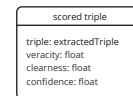

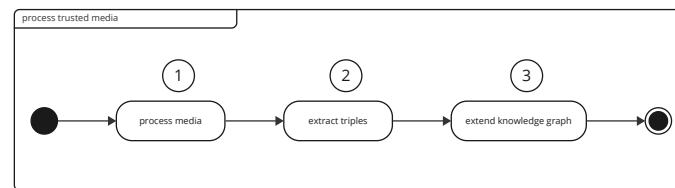

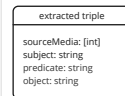

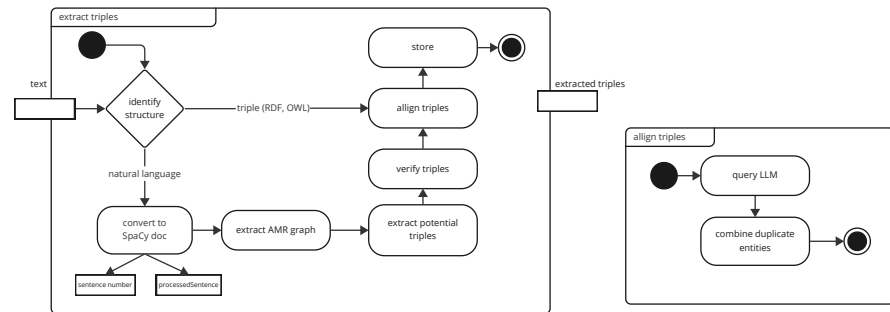

by Constantin Tremel  
(constantin.tremel@stud.uni-hannover.de)

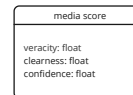

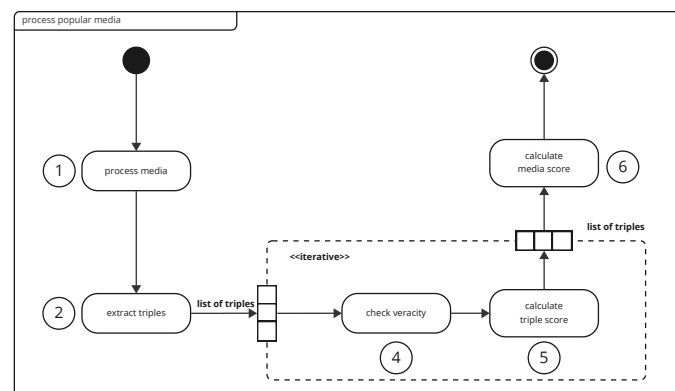

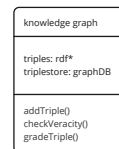

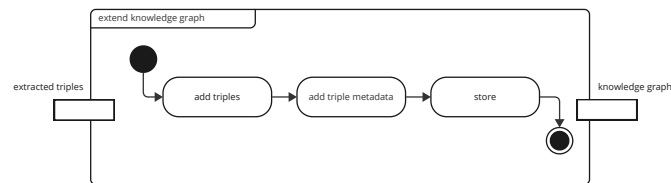

Given the masses of available media it is humanly impossible to process it all. Some media gains a lot of attention while it remains unclear how well it coincides with trusted scientific knowledge.

We propose the calculation of a scientific veracity score by testing these popular media e.g. news articles and videos against trusted media such as papers and journals:
